1. Introduction

This document explains the vendor unique capabilities, which are used by Type0004 module (Type0004.md3, Type0004 module.bundle).

These definition values are defined in Maid3d1.h. Refer to the MAID 3.1 Specification for the details of capabilities.

NOTE) These unique capabilities may have different function at another module.

2. Supported camera

Type0004 module can control D7000 camera.

3. Vendor Unique Capabilities

The vender unique capabilities that are used by Type0004 module are described as follows.

The under line shows default value.

- Scene Modes

  In this document, the exposure mode other than P, S, A, M, and the SCENE set by Capability_SceneMode are called “Scene Modes” in D7000.

  If the exposure mode is U1 or U2 and the value of Capability_UserMode1 or Capability_ UserMode2 is “Scene Modes”, that are also called “Scene Modes”.

The member "ulThumbnailSize" and "pThumbnailData" of "NkMAIDWBPresetData" structure is used only for kNkMAIDCapOperation_Set.

The red gain value is set to the upper 2 bytes, the blue gain value is set to the lower 2 bytes of "ulPresetGain". The both of red and blue gain value is expressed by the 8.8 format fixed-point number. (e.g. 1.5 → gain value:0x0180) The range of gain value is 0 ≤ gain value < 8 (0x0000 - 0x07FF).

The thumbnail data set to "pThumbnailData" must be match the following requirement.

This capability shows the current selected Picture Control.

When the client sends kNkMAIDCapOperation_GetArray, the module returns the all Picture control enumeration value including unused Option Picture Control and Custom Picture Control.

The client can know whether the Picture Control is used or not by checking “CustomFlag” in Picture Control Data format.(see Capability_PictureControldata)

When the client sends kNkMAIDCapOperation_Set with unused Picture Control, the module returns kNkMAIDResult_DeviceBusy.

When the Picture Control selected currently is changed, kNkMAIDEvent_CapChangeValueOnly is issued about this capability. And when the content of Picture Control data is changed, kNkMAIDEvent_CapChange is issued about Capability_ChangedPictureControl.

When the Capability_ExposureMode is Scene Modes, the ulOperations of this capability is set to read-only.

3.36. ChangedPictureControl

- The Picture Control was changed by edit.
- The Option or Custom Picture Control was saved.
- The Option or Custom Picture Control was deleted.
- The Option or Custom Picture Control was renamed.

The current value of this capability shows the last modified Picture Control.

After the client gets the list of modified Picture Control by kNkMAIDCapOperation_GetArray, the module resets the enumeration data and the current value of this capability will be reset to 0 , and the list of modified Picture Control will be deleted.

When the Picture Control is reset, kNkMAIDEvent_CapChange is not issued.

3.37. PictureControlData

Data	pointer to NkMAIDPicCtrlData structure

```
typedef struct tagNkMAIDPicCtrlData
{
    ULONG   ulPicCtrlItem;------ The target Picture Control
    ULONG   ulSize;------------------The size of Picture Control data (Max: 609 bytes)
    bool    bModifiedFlag; ------------Modification flag
                                        (false: initial registration,   true: edit)
    void*   pData;---------------------- The pointer of Picture Control data.
} NkMAIDPicCtrlData, FAR* LPNkMAIDPicCtrlData;
```

The range of value sets to "ulPicCtrlItem" is enumerated by Capability_PictureControl.

[In case of Set]

When the client sends kNkMAIDCapOperation_Set, the client must set the all the member of NkMAIDPicCtrlData.

If "bModifiedFlag" is false (initial registration), the module updates the current value and default value of Picture Control, by the content of "pData". If "bModifiedFlag" is true (edit), the module updates the current value of Picture Control only, by the content of "pData".

The limitations at Set are as follows.

- If "ulPicCtrlItem" is Standard(1), Neutral(2), Vivid(3), Monochrome(4), Portrait(5), Landscape(6), Option Picture Control(101-104), bModifiedFlag must be set to true(edit).
- If "ulPicCtrlItem" is Custom Picture Control(201 - 209), the "CustomFlag" of Picture Control data must be set to custom (1).
- "RegistrationName" will not be used when "ulPicCtrlItem" is Standard(1), Neutral(2), Vivid(3), Monochrome(4), Portrait(5), Landscape(6).
- If "ulPicCtrlItem" is Neutral(2), Custom Picture Control(201 - 209), the "QuickAdjustFlag" of Picture Control data must be set to invalid (0).
- If "ulPicCtrlItem" is Monochrome(4), "MonochromeFlag" of Picture Control data must be set to monochrome (1). If "ulPicCtrlItem" is not Monochrome(4), "MonochromeFlag" of Picture Control data must be set to color(0).
- When "MonochromeFlag" is changed, bModifiedFlag must be set to false(initial registration).
- If the "QuickAdjustFlag" of Picture Control data is valid (1), the camera determines each setting by referring "QuickAdjust" of Picture Control data, and does not refer the other settings. If "QuickAdjustFlag" of Picture Control data is invalid (0), the camera determines each setting by referring the other settings, and does not refer "QuickAdjust" of Picture Control data.
- If "CustomCurveFlag" of picture control data is used (1), the client have to set Custom Picture Control(201 - 209) to "ulPicCtrlItem".

[In case of Get]

When the client sends kNkMAIDCapOperation_Get, the client must set the maximum Picture Control data size, 609, to "ulSize", and set the allocation space for 609 bytes to ”pData”.

The module sets the size of the picture control data actually set to “pData” to “ulSize” when succeeding in acquisition.

It is possible to get Picture Control data about unused Picture Control data.

The value range of x and y is defined by “total size” of “Display information” in Live view image. (please refer NkMAIDCapability_GetLiveViewImage)

But the range that can be actually set becomes an area where "size of the AF frame" length and breadth size half was subtracted from the length and breadth size of "total size" respectively.

When the value that exceeds the range that can be set to x and y is set, the maximum or minimum value will be used as this value.

This capability is valid when Capability_LiveViewStatus is ON(1).

This capability execution timing is limited to the following 2 cases.

1. Before receiving kNkMAIDEvent_AddChild
2. After issuing kNkMAIDCapability_Acquire for Image Object, and before issuing kNkMAIDCommand_Close

In case of 1, the client set Capability_CurrentPreviewID and execute this capability, the deletion will be completed.

In of 2, the client will issue Capability_Acquire for Image object and cancel Capability_Acquire by kNkMAIDCommand_Abort, and set Capability_CurrentPreviewID and execute this capability, so, the deletion will be completed.

In case of RAW+JPEG, kNkMAIDEvent_AddPreviewImage is issued only for JPEG image. that is not issued for RAW image.

In case of deletion of RAW+JPEG, if the client executes this capability for JPEG, the both of RAW and Jpeg files will be deleted at the same time.

About dust off ref photo and RAW file of RAW+JPEG, there is no preview image, so kNkMAIDEvent_AddPreviewImage is not issued. But the client can delete the DRAM image by using Item ID notified by data parameter of kNkMAIDEvent_AddChild.

When the client deletes DRAM image after receiving kNkMAIDEvent_AddChild, the client must close Item objcet. The module does not close Item object.

This capability is not supported when an image is saved on Crad.

[D3S] To Delete SDRAM image by this capability is prohibited, when it is applied for either of condition below. In this case, this capability returns kNkMAIDResult_NotSupported.

- The value of Capability_SaveMedia is “2 : Card + SDRAM”.
- The value of Capability_SaveMedia is “2 : Card + SDRAM”, and it has not completed to read all SDRAM image, after Capability_Capture or Capability_AFCapture or Capability_CaptureDustImage is executed.

3.184. RawJpegImageStatus

This will get whether the image is taken on RAW+JPEG mode.

Capability kNkMAIDCapability_RawJpegImageStatus

Object types Image

ulType kNkMAIDCapType_Unsigned

ulOperations kNkMAIDCapOperation_Get

Data one of eNkMAIDRawJpegImageStatus

3.185. CurrentPreviewID

This will specify the DRAM image operated now.

Capability kNkMAIDCapability_CurrentPreviewID

Object types Source

ulType kNkMAIDCapType_Unsigned

ulOperations kNkMAIDCapOperation_Get, kNkMAIDCapOperation_Set

Preview ID is used as an identifier that specifies the image data in SDRAM.

Preview ID is notified by data parameter of kNkMAIDEvent_AddChild.

In case of image data to which kNkMAIDEvent_AddPreviewImage is not issued, RAW of RAW+JPEG and dust off ref photo, the client uses Item ID notified by data parameter of kNkMAIDEvent_AddChild as Preview ID.

The value of this capability is referred by Capability_DeleteDramImage.

3.186. GetLiveViewImage

This will get Live view image.

Capability kNkMAIDCapability_GetLiveViewImage

Object types Source

ulType kNkMAIDCapType_Array
kNkMAIDArrayType_Unsigned

ulOperations kNkMAIDCapOperation_Get, kNkMAIDCapOperation_GetArray

The client will get the size of Live view image by kNkMAIDCapOperation_Get, and get a actual Live view data by kNkMAIDCapOperation_GetArray.

Every time, the size of Live view image need not be confirmed with kNkMAIDCapOperation_Get in this capability before execution of kNkMAIDCapOperation_GetArray because the specification of Live view image is always fixation.

When the client want to get Live view image with kNkMAIDCapOperation_GetArray, the client must allocate the buffer for the maximum size, and set buffer to kNkMAIDArray.pData, and set allocate size to kNkMAIDArray.ulElements.

After reading preview image, kNkMAIDArray.ulElements will be updated with the actual size of Live view image I, the Live view image will be set to kNkMAIDArray.pData.

When Capability_LiveViewStatus is OFF(0), the ulOperations of this capability is set to read-only, kNkMAIDCapOperation_GetArray is invalid.

If Live view is stopped by camera automatically (including when the live view time limit passes), the module returns kNkMAIDResult_NotLiveView.

Live view image is consisted of “Display information” and “Live view image(JPEG).”

The pixel size of Live view image is different in each Live view data, each detailed information is set to “Display information” area.

    ULONG   ulDataSize;-----Size of buffer set to "pData"
    LPVOID   pData;---------Pointer to buffer
} NkMAIDGetVideoImage, FAR* LPNkMAIDGetVideoImage;
```

The client will get the size of Movie image by kNkMAIDCapOperation_Get, and get a actual Movie data by kNkMAIDCapOperation_GetArray.

[In case of Get]

The data size for the unacquisition is set to kNkMAIDGetVideoImage.ulDataSize.

[In case of GetArray]

When the client want to get Movie image with kNkMAIDCapOperation_GetArray, the client must allocate the buffer for size to be acquired, and set buffer to kNkMAIDGetVideoImage.pData, and set allocate size to kNkMAIDGetVideoImage.ulElements, and set offset position to kNkMAIDGetVideoImage.ulOffset.

After reading, the size of data actually read will be set to kNkMAIDGetVideoImage.ulReadSize and the Movie image will be set to kNkMAIDGetVideoImage.pData.

It is necessary to set "kNkMAIDArrayType_Unsigned" to kNkMAIDGetVideoImage.ulType.

When the value that exceeds the size of actual movie data is set, module returns kNkMAIDResult_ValueOutOfBounds.

ulOperations kNkMAIDCapOperation_Get

Data 0.0° - 359. 9999847412109375°

when angle information cannot be acquired : -1

The angle becomes 0.0 degree when the camera is horizontal, and increases when the camera is turned to an anti-clock surroundings in view of the photographer.

The range of the angle is from 0.0 degree to 359.9999847412109375 degrees.

It becomes 0.0 degree or more if it turns anti-clockwise from the state of 359.9999847412109375 degrees.

It becomes 359.9999847412109375 degrees or less if it turns clockwise from the state of 0.0 degree.

The event is not issued even if there is a change in angle information on the camera.

The module returns -1 when angle information cannot be acquired or there is no reliability in the angle.

When the numerical value that adds 0.5 to the real number value and cuts down the fraction part is a multiple of 0 or 90, it is judged it is the horizontal and vertical.
